EDUCATION

University of Texas at Austin, College of Natural Sciences

Austin, TX

Bachelor of Science in Computer Science

Aug. 2024 – May 2028

Relevant Courses: Data Structures, Operating Systems, Software Engineering, Computer Organization & Architecture, Discrete Math, Computer Graphics, Multivariable Calculus, Pitch to Prototype, Data Management, Cloud-Native Computing

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Go, C, C++, C#, Java, SQL, Rust

Frameworks & Libraries: React (Next.js, React Native/Expo, Electron), Node.js, Express, FastAPI, Flask, Tailwind CSS

Cloud & Observability: Cloudflare Workers/R2/KV, AWS, Docker, Prometheus, Grafana, Kibana, Firebase, Supabase

Databases & Tools: PostgreSQL, SQLite, Kubernetes, BigQuery, Drizzle ORM, Git, GitHub Actions, CI/CD, REST APIs

EXPERIENCE

Software Engineer Intern - Cloudflare Stream | Cloudflare, Austin, TX

May 2026 – Aug. 2026

- Built an async live-captioning pipeline on Cloudflare's edge network (Workers AI + R2) delivering synchronized WebVTT captions under a 5s latency target for broadcasts exceeding 100K concurrent viewers.
- Engineered an overlapping-window audio remuxing pipeline using FFmpeg to feed continuous audio segments to Workers AI, reducing Word Error Rate (WER) by 10% during live stream speech transcription.
- Architected a distributed stream-key rotation service in Go and TypeScript across 3 microservices, automating edge cache invalidation to instantly revoke unauthorized broadcasts globally in <10s.
- Instrumented end-to-end integration tests and Prometheus/Grafana/Kibana observability, establishing continuous tracking for p99 caption latency and credential revocation SLAs.

Software Engineer | BetterCampus [Chrome Web Store], Remote

June 2025 – Present

- Led architectural modernization of BetterCampus (2M+ downloads, 5K+ districts), migrating a legacy codebase to a modular React monorepo on Supabase and Cloudflare Workers for scalability and maintainability.
- Implemented internal marketing campaign tooling designed to target millions of users, combining cron-driven precomputation of 512-partition audience snapshots with multi-tier edge caching via Cloudflare Workers KV and Cache API.
- Developed a grade intelligence platform integrating Canvas LMS APIs, designing persisted caching and multi-source reconciliation logic across local overrides and custom assignments to power real-time what-if scenarios, benchmarks, and grade trends.
- Standardized engineering workflows across a 12+ person team, integrating Linear tracking, technical design reviews, and automated CI/CD quality gates to accelerate release cycles and improve code quality.

Software Engineer | UT Austin Center for Media Engagement, Austin, TX

Sept. 2024 – Present

- Deployed React and Firebase tooling for a social media misinformation research experiment, automating feed configuration, participant condition assignment, and Qualtrics-linked event logging across 8,500+ participant interactions.
- Created researcher-facing dashboards and BigQuery/CSV data pipelines to streamline study administration, track participant behavior, and manage user feedback across multiple media experiments.

Software Engineer Intern | Planview, Austin, TX

May 2025 – Aug. 2025

- Resolved legacy C# bugs with targeted unit and integration tests, improving code reliability and reducing issue reports.
- Collaborated with engineers through sprint planning and code reviews to deliver tested C#/ASP.NET features.

PROJECTS

UT Dining | React Native/Expo, TypeScript, Supabase, SQLite, Cloudflare Workers

[App Store](#) | [GitHub](#)

- Drove end-to-end development of a campus dining app serving 10,000+ active students (160,000+ impressions), directing cross-functional development and establishing code review and CI/CD workflows.
- Constructed a Cloudflare Workers edge proxy to cache database queries closer to users, cutting load times by 70% and reducing backend egress bandwidth by 96% to yield a cost savings of \$120/month.
- Optimized web scraping pipeline by replacing Puppeteer with Cheerio and benchmarking concurrency, achieving a 17× speedup to process 500+ menu items in <5 seconds.
- Designed an offline-first mobile data layer using SQLite and Drizzle ORM to enable persistent local caching, reducing network requests by 80% while ensuring seamless background synchronization of daily menu data upon reconnection.

EXTRACURRICULAR ACTIVITIES

Project Lead | Longhorn Developers, Austin, TX

Sept. 2024 – Present

- Directed a 6-person Agile team in rebuilding UT Lectures Plus for 1,000+ student users, owning the end-to-end product roadmap, delegating feature ownership, and driving delivery from initial requirements through launch.
- Formulated standardized engineering workflows using GitHub Projects, CI/CD pipelines, structured PR reviews, and local development tooling to elevate code quality and accelerate developer onboarding.
